

# Product PORTFOLIO

Pharmacy safety enhancement has guided every **Baxa** innovation since we pioneered our first product in 1975. Developing products and systems to raise the safety bar ever higher has become a Baxa hallmark in the three decades since. Baxa products embrace all aspects of compounding, dispensing and delivery fluid medications, including oral unit dosing, IV admixture, syringe infusion and automated compounding.

Streamlined pharmacy operations. Heightened assurance. Lowered risks. Better patient outcomes. And a commitment to safety that's unsurpassed. We invite you to explore the latest in safety products for pharmacy.

The **Baxa Exacta-Mix™ 2400 Compounder** brings state-of-the-art technology to automated total parenteral nutrition compounding. Combining safety, accuracy and specialized software, this system offers 24-source mixing for both macro and micro ingredients. Comprehensive calculation software provides multi-user capability through network interfaces. Baxa com-

pounders feature patented technology to achieve high accuracy in low-volume deliveries, as well as high flow rates for high-volume deliveries. The EM2400 system can be configured to meet your facility's specific requirements. Dispensing by volume and verifying with a gravimetric check, the EM2400 delivers final bag weights within  $\pm 3\%$ , transferring volumes as low as 0.2 mL. A graphical user interface and touchscreen controls make the system user friendly. Barcode verification of source containers and patient formulas ensure safety.

Baxa Corporation's Windows-based **Abacus™ TPN Calculation Software** is used for total parenteral nutrition order entry and compounding. Designed by health-system pharmacists, the software reduces the opportunity for user error in prescribing, calculating, and mixing multi-source compounds. Abacus products provide built-in safety features, such as bar code gen-

eration and user customization for warning limits, order templates, and security. A graphical user interface and drop-down menus facilitate efficient use.

The **Baxa Rapid-Fill™ Automated Syringe Filler (ASF)** is the only pharmacy system designed to automate sterile batch syringe processing. Combining the steps of filling, capping, and labeling, the Rapid-Fill ASF brings safety and efficiency to pharmacy operations. Accurate to  $\pm 0.2$  mL, it's a cost-effective alternative to minibags and pre-filled syringes.

Intended for use within a hood, the Rapid-Fill ASF is spill-resistant and easy to clean, with an intuitive user interface.

The versatile **Baxa Repeater™ Pump** automates routine filling procedures, increases your efficiency, and ensures accuracy. Use it for IV admixture and batch filling of luer syringes, elastomeric infusers, and oral liquid vials and dispensers. Simple to operate, the Repeater Pump decreases the manual manipulation needed for filling procedures. Not only a time saver, the pump is also a cost-effective tool for streamlining your pharmacy procedures. Tube sets are available for viscous drug delivery, and adapters and tip caps make filling simple. Accurate to 0.2 mL, the pump has a maximum water

flow rate of 13.5 mL per second and includes a power cord, foot pedal, and technical manual.

The entry-level **EM600 Compounder** combines six-station compounding facility with pharmacy pumping accuracy:

- As a pharmacy pump, the Exacta-Mix Compounder simplifies basic fluid-handling procedures.
- With an easy connection to a PC, the pump can direct fluid from six different sources. For healthcare facilities producing as few as three to five TPN bags per day, the Exacta-Mix Compounder offers significant cost and time savings. For providers using other Baxa compounders for mixing TPN solutions,

an EM600 System is an economical way to produce cardioplegia, dialysis, and other solutions, without interrupting the workflow for nutritional compounding.
