

■ **Mop for Cleaning Floors, Walls, and Ceilings**

Contec releases the EasyCurve Mop, designed specifically for cleaning floors, walls, and ceilings in cleanrooms and controlled environments. Consisting of a flat, fabric-laminated mop head attached to a curved, stainless-steel frame, EasyCurve is compatible with a wide range of disinfectants, solvents, and cleaning solutions. The 14-inch disposable mop head features a pivoting connector and a curved mop face to increase surface contact and improve maneuverability.

■ **Sterile Alcohol Solution and Hands-Free Dispenser**

Decon Labs now offers CiDehol ST (32 ounce) sterile alcohol solution in a bag/cartridge for use with hands-free infrared dispensers. CiDehol ST 70% IPA solution is made to meet water-for-injection (WFI) specifications with regards to endotoxin levels. Endotoxin testing is performed on all lots of finished sterile alcohol products and results are listed on a lot-specific document shipped with each case. Decon's sterile alcohol solutions are filtered to 0.2 mm, bottled and double-bagged in a Class 100 cleanroom, and gamma-irradiated and tested for sterility. A hands-free, infrared dispenser is sold separately.

■ **Suspending Agent**

Gallipot introduces SyrSpend SF, a one-step suspending vehicle for oral liquids. A new starch-based technology provides a sweet, sugar-free suspending agent, and because of its low osmolality, SyrSpend SF can result in fewer reports of GI upset, especially from pediatric and geriatric patients. The starch technology can also result in long-lasting suspendability, with less clumping than cellulose systems.

SyrSpend SF is available in unflavored, cherry, and grape varieties.

■ **Particulate Filter Respirator**

The Kimberly-Clark N95 Particulate Filter Respirator is NIOSH-approved and provides 95% filtration efficiency of 0.3-micron particles. The pouch-style mask has a fluid resistant layer and a safety seal film. It features a large breathing chamber with limited facial contact and two polyurethane headbands that secure the mask to the face to help ensure a tight facial seal and prevent leakage around the mask's edges. It is available in sizes small and regular.

■ Modular Cleanroom System

The Simplex SIS 797 modular enclosure system's frame has adjustable insert channels for the creation of flush, easy-to-clean wall surfaces. The system can be fitted for wall panels of ABS composite, polycarbonate, white epoxy aluminum, acrylic, tempered glass, or other materials. Designed for ISO Class 8 applications, the SIS 797 system can be designed as a pass-through, a complete enclosure system, or as a wall system to divide existing cleanroom space. Factory-assembled SIS 797 modules come with an optional integrated ceiling system.

■ Compounding Aseptic Isolator

Baker's SS800 compounding aseptic isolator (CAI) has two double-glove work chambers connected with an internal pass-through, allowing product hand-off between two technicians in multi-step compounding activities. Internal pass-through doors may be closed, allowing each chamber to operate as a stand-alone single technician (two-glove) isolator. The SS800 features laminar airflow within each of the main work chambers and the pass-through chambers, a sloped front panel for user comfort, and an outer pass-through door for the efficient transfer of materials.

■ ACPE-Accredited Online Training

CriticalPoint's Sterile Compounding Curriculum includes the "Purpose and Effective Use of Policies and Procedures" course written by Patricia Kienle. This ACPE-accredited course supplies guidelines for consistent and safe preparation of sterile compounds, proper procedures to follow, and a roadmap to ensure that preparations are reproducible by any staff member. The module is part of CriticalPoint's comprehensive curriculum of 32 online courses, which meet USP Chapter <797>'s competency-assessment requirements. Each CriticalPoint course is ACPE-approved for one hour of CE.

■ Closed Male Connector

ICU Medical announces the Spiros Closed Male Connector, a universally compatible, needle-free device to protect health care workers from exposure to hazardous medications during preparation and administration. Spiros is designed to protect the integrity of the IV fluid container and to create a closed system for product transfer and mixing. Upon disconnect, the connector self-seals and only opens when attached to a female connector. Its integrated custom IV sets enable use in a variety of pharmacy and nursing procedures.
