

Ready-to-Use IV Products Watch

In the continuous effort to comply with USP <797> and The Joint Commission's National Patient Safety Goals, pharmacists are seeking products that save time and labor while maximizing patient safety. Ready-to-use IV products are often cited as a means to meet those ends, as they eliminate the need to perform compounding and, therefore, can reduce the potential for medication errors and product contamination. To help you increase efficiency and improve patient safety, PP&P presents the following resource for finding ready-to-use IV products.
