

Quality and Dependability for the Future

For over 35 years **NuAire** has been universally recognized as the leader in providing pharmacy professionals with reliable products for the most demanding environments. NuAire's mission has always been to develop and deliver innovative products, communicate the latest technologies and product improvements, establish trust in both product and personnel, and seek customer satisfaction. NuAire has developed a complete line of pharmacy products that aid pharmacists with aseptic techniques including vertical and horizontal flow hoods, from Class II biological safety cabinets, compounding aseptic isolators and containment isolators, and over 2,000 accessories for the working individual.

NuAire's® **PharmaGard™** Compounding Aseptic Isolators (CAIs) and Containment Isolators (CACIs) are your Single Source Solution to ensure your compliance with USP Chapter <797> for the proper preparation of compounding sterile products (CSPs). NuAire offers three isolators in multiple sizes: the PharmaGard™ NU-PR797 Positive Pressure (CAI), NU-NR797 Negative Pressure Re-circulating (CACI), and NU-NTE797 Negative Pressure Total Exhaust (CACI). NuAire's isolators are constructed with seamless stainless steel interiors and

exteriors, centrally located control centers, interior stainless steel IV bars at multiple interior heights, oversized slanted glove ports, and space saving sharps and waste chutes, all designed with the ergonomic needs of the end user in mind.

NuAire's® **AireGard** line of Horizontal Flow Workstations combine performance and quality. The NU-201 and NU-301, featuring the HEPEX Zero Leak Airflow System, create true laminar airflow and uniform horizontal velocities throughout the entire work zone. Both models achieve

minimal air turbulence by making the work area enclosure zone an extension of the HEPA filters' actual flow area. The clean filtered, uniform velocity air is then allowed to flow outward in streamlines, eliminating "backwash." The highly reliable vibration control system provides extraordinary attenuation of sound and vibration. Controls, adjustments, pre-filters, and HEPA filters are conveniently accessible from the front of the unit.

NuAire's® **LabGard®** Series 50 Class II Biological Safety Cabinets features the **TOUCHLINK** system that utilizes a touch-screen LCD to offer step-by-step on-screen instructions that aid personnel/certifiers with cabinet maintenance. **TOUCHLINK** can start and/or stop cabinet operations on a customizable schedule, contains password protection, and integrates with current laboratory security systems.

The **LabGard®** creates laminar airflow that minimizes air turbulence within the work zone, creating an ISO Class 5 environment. The HEPEX Zero Leak Airflow System produces quiet, uniform down-flow for a sterile work zone, eliminating leaks and guards against HEPA filter failure.

LabGard® BSC's are built for comfort, designed to eliminate awkward posture and relieve arm, neck, and shoulder strain, with frameless polished edge windows for greater visibility reducing eye fatigue.

ScientificVisions.com, NuAire's online store provides over 2,000 accessories for the working professional. The website offers a wide variety of ergonomic options to alleviate bodily strain and increase safety conditions for pharmacy professionals, along with a variety of pharmacy cleaning

products (i.e. sterile wipes, extending cleaning mops, isopropanol spray, swabs, etc.) to ensure the accuracy and sterility of compounded pharmacy products. You can order your accessories online at www.scientificvisions.com.

NuAire's® **AireGard** line of Vertical Flow Workstations uses HEPA filter technology to create the proper environment needed for pharmacy professionals. The NU-126 Positive Pressure Workstations are designed to provide the ideal particle-free, bacteria-free, clean-air environment needed for aseptic techniques. The NU-813 Negative Pressure Workstations are the perfect size and cost for any pharmacy powder

work. The open front allows room air to flow in past the operator and over the work in progress, protecting the end user.
